Calculate its value in SI units. The dimensional formula for gravitational constant is $[M^{-1}L^3T^{-2}]$. In cgs system, dimensional formula for G is $[M^{-1}L^3T^{-2}]$. In SI system, dimensional formula for G is $[M^{-2}L^2T^2x]$ Here $x = -1$, $y = 3$, $z = -2$. To check the dimensional correctness of a given equation Let us take the equation of motion $s = ut + \frac{1}{2}at^2$ Applying dimensions on both sides ...

Dimensional analysis is another format for setting up problems to calculate drug dosages. The advantage of dimensional analysis is that only one equation is needed. This is true even if the information supplied indicates a need to convert to like units before setting up the proportion to perform the actual calculation of the amount of medication to be given to the patient.

Dimensional Analysis (also called Factor-Label Method or the Unit Factor Method) is a problem-solving method that uses the fact that any number or expression can be multiplied by one without changing its value. It is a useful technique. The only danger is that you may end up thinking that chemistry is simply a math problem - which it definitely is not. Unit factors may be made from any two ...

Analysis means to think about something, often focusing on one part at a time. Putting it all together, dimensional analysis means thinking about units piece by piece. Dimensional analysis can be used to correctly go between different types of units, to catch

mistakes in one's calculations, and to make many useful calculations in real life.

In dimensional analysis, a ratio which converts one unit of measure into another without changing the quantity is called a conversion factor. For example, kPa and bar are both units of pressure, and $100 \text{ kPa} = 1 \text{ bar}$. The rules of algebra allow both sides of an equation to be divided by the same expression, so this is equivalent to $100 \text{ kPa} / 1 \text{ bar} = 1$.

But, rest assured, any textbook on a quantitative subject such as physics (including this one) almost certainly contains some equations with typos. Checking equations routinely by dimensional analysis save us the embarrassment of using an incorrect equation. Also, checking the dimensions of an equation we obtain through algebraic manipulation is a great way to make sure we did not make a ...
