3 2. Natural user interface interaction The human interface guidelines document [Microsoft, 2012], later referred to as the HIG document, is the current standard for the NUIs that use the Kinect device. The HIG document was released by Kinect team after our designing and developing was done, so

## Usability of natural user interface buttons using Kinect

Kinect is a line of motion sensing input devices that is based around a webcam-style add-on peripheral. It enables users to control and interact with their console/computer without the need for a game controller, through a natural user interface using gestures and spoken commands.

## Kinect - ETC Public Wiki

This complicates interaction, because the user has to learn these basic operations for each application (game) again. The Kinect system supports only one generic gesture. This Gesture prompts the system to pause the game. To do this, the user has to position both arms to his sides.
