The presence of nonlinearity in the model of a neuron limits the scope of their application to neural networks .

Nevertheless, signal-flow graphs do provide a neat method for the portrayal of the flow of signals in a neural network.

### **cal Systems (MEMS)**

MEMS has enabled the micromirrors to be only 1  $\mu\text{m}$  apart, resulting in an image taking up a larger percentage (89 percent) of space on the DMD chip's reflective surface, as compared to a typical LCD (12 to 50 percent). This reduces the pixelation and produces an overall sharper and brighter image.
