DOS commands are the commands available in MS-DOS that are used to interact with the operating system and other command line based software. Unlike in Windows, DOS commands are the primary way in which you use the operating system. Windows and other modern OSs use a graphics-based system designed for touch or a mouse.

In DOS, many standard system commands were provided for common tasks such as listing files on a disk or moving files. Some commands were built into the command interpreter, others existed as external commands on disk. Over the several generations of DOS, commands were added for the additional functions of the operating system.
