Living Planet Unit 6, page 4 OPEN OCEAN FOOD CHAINS In the open water of the oceans, all the organisms must either float or swim. The plankton are small organisms that are designed to float or are such weak swimmers that they cannot escape the ocean currents. In the oceans, most of the phytoplankton consists of tiny algae.

A simple workbook (including poster) that I made to help to learn, write, spell and arrange the eight planets of the Solar system. Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. In 2006, Pluto was not really a planet because of its size and location in space therefore I didnt include it in the workbook.
